SUMMARY

Technical Product Manager with 6+ years building digital products across mobile, fintech, and cloud. I specialise in turning ambiguous system challenges — real-time data, cross-platform mobile constraints, distributed APIs — into clear engineering specifications. I have hands-on experience building agentic AI workflows with LLMs and MCP and hold multiple Generative AI certifications from AWS and Databricks.

EXPERTISE

AI & Agentic Systems	Generative AI · LLM Integration · Agentic Workflows · MCP (Model Context Protocol) · Real-time Data Pipelines · Prompt Engineering · AI-assisted Development · AWS & Databricks AI Ecosystem
Product & Delivery	0-to-1 Product Development · Product Discovery · Roadmapping · Backlog Management · Mobile (iOS/Android) · API Integration · MVP Shaping · Risk & Dependency Management
Technical Literacy	Telecommunications Engineering · Distributed Systems · REST APIs · Mobile Background Processing · Real-time Data Flows · Cloud (AWS, Azure) · Signal Processing Fundamentals
Business & Collaboration	Stakeholder Alignment · Cross-functional Coordination · Technical Specification Writing · Conflict Resolution · Workshop Facilitation
Tools	Claude Code · Gemini · Jira · Figma · Confluence · Miro · Notion · Google Workspace · Slack · Azure DevOps
Continuous Learning	Building full-stack projects (Next.js, TypeScript, Tailwind, Framer Motion) on GitHub · Active learner on Scrimba's Full-Stack path, applying concepts directly to shipped projects

WORK EXPERIENCE

Product Manager

August 2025 – Present

— Thinslices, Bucharest (Remote)

Leading product for a mobile-first, real-time event discovery platform for iOS and Android, with a distributed backend integrating Spotify, Twilio SMS, push notifications, and a REST API ecosystem.

- **Designed real-time social and notification systems** — the follow model, privacy controls, visibility settings, and push notification infrastructure across iOS and Android, including platform-specific behaviors (iOS Dynamic Type, Android Predictive Back Navigation, safe areas, accessibility).
- **Translated ambiguous system challenges into engineering specifications** — coupled follow/privacy/notification models, Spotify data ingestion, real-time social signals, acting as the technical bridge between backend, mobile, and UX teams.
- **Built agentic AI workflows with Claude Code and MCP** — integrating Jira, Figma, Google Drive, and Slack into a PM agent for automated sprint reporting, backlog generation from design files, and project health monitoring.
- **Led an AI Hackathon initiative** — planning the build of a Project Reporting Agent (data ingestion across Jira/Slack/Drive with LLM-based synthesis) and a Sprint Report Generator, both built on agentic workflows.
- **Authored a scope and impact analysis** to align stakeholders on a 30% budget extension — structuring re-estimations caused by inter-feature dependencies and system coupling across multiple sprints.
- **Delivered a dementia finance management platform end-to-end** — authored an architectural trade-off document (build vs. leverage vs. hybrid for third-party backend) that drove the stakeholder decision and

unblocked delivery.

Delivery Manager

June 2021 – August 2025

— Levi9, Iași (Remote)

Managed multi-team agile delivery for large-scale Fintech and Transportation products across web, mobile, and API — ensuring sprint predictability, technical transparency, and client alignment.

- **Founded and led an internal Agile training initiative** that grew to 11 members and culminated in a public talk: "A State of Agile: The Good, the Bad and the Ugly" (Levi9 Tech Stories, June 2024).
- **Delivered a fintech charity donation platform** later acquired post-launch — navigated a mid-sprint scope change driven by acquisition requirements, distinguishing strategic pivot from scope creep.
- **Introduced sprint health metrics** to improve backlog quality and align product owners with engineering across multiple concurrent projects.
- Coached junior PMs on delivery discipline, agile facilitation, and technical communication.

Senior Technical Team Lead

January 2019 – June 2021

— SCC, Iași

- Increased SLA adherence by 20% through improved task ownership and escalation management.
- Mentored junior analysts and delivered L2 support for enterprise environments under strict SLA targets.

EDUCATION

BSc Telecommunications Engineering

2014–2018

— Technical University "Gheorghe Asachi" of Iași

Signal processing, communications systems, and data transmission — relevant foundation for sensor data pipelines and biometric signal architecture.

CERTIFICATIONS

Generative AI & LLM

- AWS: Generative AI Essentials (2025)
- AWS: Generative AI Sales (2025)
- Databricks: Gen AI Fundamentals (2025)
- Databricks: Gen AI & LLM (2025)
- Databricks: Financial Services AI (2025)
- Databricks: Fundamentals (2025)

Cloud & Infrastructure

- AWS: Technical Accredited (2024)
- AWS: Digital Sovereignty (2024)
- AWS: Sales Accreditation (2024)
- AWS: Business Accreditation (2021)

Agile & Delivery

- PSM I & II — Scrum.org (2022)
